## Part C- Structure

### C1: Battery Compartment

#### Radio Controlled Time:

- The clock automatically starts scanning the JJY frequency signal after new battery inserted (  flashes on the LCD). The clock automatically scans the time signal at 2:00a.m. everyday to maintain accurate timing. For failed reception in 10 minutes, scanning stops (  on LCD disappear) and repeats again at 3:00a.m., 4:00a.m., and 5:00a.m.
- The clock manually scans the time signal by pressing “ ” and “ ” button at the same time. For failed reception in 10 minutes, scanning stops (  on LCD disappear) and repeats again in the next 4 hours (4 times) until received. e.g. scan at 8:20 failed, it will received again at 9:00; 10:00; 11:00; 12:00.
- Press “ ” and “ ” button at the same time button at the same time to stop scanning
- The clock automatically scans signal from 福島(40KHz) or 九州(60KHz)
- \*  flashes indicate now is receiving JJY signal  
 turns on indicate signal received successfully
